### Abstract

The topic of this study is the textual meaning on students' recount texts of the 4th semester students of English Department, Semarang State University in the Academic Year 2016/2017. The analyses intend to figure out what Thematic structures are displayed and what Thematic progressions are employed in the students' recount texts. The approach used in this study is qualitative descriptive method, and some quantitative approaches to enhance the depth of results. The units of analysis of this study were clauses in the 4th semester students' recount texts taken from Genre-Based Writing course. The results of the Thematic structures analysis show that unmarked topical Theme is the most frequently used rather than the marked one. Modal adjunct is the only constituent of interpersonal Theme that is found to show the writer's judgment. Moreover, structural and conjunctive adjunct are used in relating the clause to its context or another clause. In addition, there only one continuative found in the text to signal a new move is made. The study also shows that the students used re-iteration (constant) to make the text keep focused. Then, zigzag pattern is commonly used in relative clauses which replace subject. While multiple (split) pattern is used to introduce a number of different pieces of information which is made as Theme in subsequent clauses.

## INTRODUCTION

In the process of communication, people express their ideas, thought and feelings or give other people information. In other word, communication is used to convey and interpret meanings. Hence, as a language students, they should be able to negotiate meaning with the other by using what we called as text in order to achieve goals. The term text, based on Eggins (1994: 5), refers to “a complete linguistic interaction (spoken or written), preferably from beginning to end”. Yet, English in Indonesia is used as a foreign language so it is rather hard for the students to create a good text. As the result, the communication will not run well effectively. Thus, it becomes our job to help the students to create a good text so that they are able to communicate effectively.

By using the good grammar, the meaning of a text will be clearer. There are three kinds of grammar. They are traditional grammar, formal grammar and functional grammar. Both traditional and formal grammar focus on the structures (syntax), whereas functional grammar not only focus with the structures but also the function of language to construct the meaning (semantics). Thus, functional grammar can help us to understand how texts work to make meaning both in the form of spoken and written text. One of the types of meaning that I am going to unveil on this study is Textual meaning, which concerns about how and what we are saying or writing hang together and relate to what was said before. It is a meaning about the message inside the text which relate to the context around us. Each clause has meaning that will correlate to the next clauses. Moreover, the meaning of a text will be intelligible for the listeners or the readers when it relates to its context.

These textual meanings are realized through the Theme patterns of the grammar which are in the form of Thematic structures and Thematic Progressions. Theme is the beginning of the clause where we put information which links the clause to what has come before. Broadly speaking, Theme is what comes first in a clause and what the clause is going to be about. The remainder of the clause, which explains about the Theme and contains new information is then called Rheme. Textual meanings look at how we structure information in a clause that will tell us about where the clause is coming from (beginning) and where it is going to (end). Every clause has the character of a message in the form of organization that fits in with, and contributes to the flow of discourse. Halliday & Matthiessen, (2004: 64) stated, “One part of the clause is enunciated as the Theme, and it is combined with the remainder of the clause so that those parts together constitute message”. In a clause structure, it consists of a Theme and accompanied by Rheme. Whereas Theme is always put at first and starts from beginning of a clause.

Themes are divided into three types; ideational/topical Theme, interpersonal Theme, and textual Theme. The first nominal group in a clause is usually the Ideational or Topical Theme. It means that when the elements of Transitivity that is either participant, circumstance, or process can be assigned occurs in the first position in a clause. Gerot & Wignell (1995: 104) stated, “Topical Themes may also be nominal group complexes, adverbial groups, prepositional phrases or embedded clauses”. Since a participant in thematic structure coincides to the topic, we refer this constituent as Topical Theme.

A topical Theme which is not the subject, in a declarative clause, is called a marked topical Theme. The term marked is used because it stands out. The most common form of marked topical Theme is an adverbial group, prepositional phrase, and complement, which is nominal group that is not functioning as subject. While Unmarked topical Theme put the Theme as subject of the declarative clause. In daily conversation the most often item functioning as unmarked topical Theme is pronoun, nominal group such as common or proper noun, and nominalization (embedded clause). When a constituent to which we would assign a Mood label occurs at the beginning of a clause before the Topical Theme, we call it an interpersonal Theme. According to Gerot & Wignell (1995: 107) the constituent which can function as interpersonal Themes are: Modal Adjuncts,

Vocative, finite or Wh-elements. Textual Theme as the last type of Theme which does not express any ideational or interpersonal meaning, but which is doing important cohesive work in relating the clause to its context. Structural, conjunctive adjunct and continuative are the constituents of textual Theme.

The progressions from Theme to Rheme show the flow of information in a clause. It is essential to keep the coherent of the text in order to get successful communication and exchange meaning between others. Furthermore, the pattern of interaction among clauses within a text is called Thematic Progressions. Egins (2004: 324-325) proposes three main patterns of Thematic progressions; theme re-iteration (constant), zigzag pattern (linear), and multiple –Theme pattern (split).

One basic way to keep a text focused (cohesive) is to simply re-iterate an element. Repetition is an effective means of creating cohesion. Having the same participant made Theme on a regular basis provides the text with a clear focus. The same element occurs regularly as Theme in this Thematic pattern. However, it causes to be boring to read or listen because the Theme in the text never varied.

Figure 1.1 Theme Re-iteration

In zigzag pattern, an element which is introduced in theme in clause 1 gets promoted to become the Theme of clause 2. This pattern achieves cohesion in the text by building on newly introduced information. This gives the text a sense of cumulative development which may be absent in the repeated Theme pattern.

Figure 1.2 Zigzag Pattern

While in the multiple-Theme pattern, the Theme of one clause introduces a number of different pieces of information, each of which is then picked up and made Theme in subsequent clauses.

Figure 1.3 Multiple-Theme Pattern

Different Theme will determine the point of the clause. Thus, textual organization is essential because without structures such as Theme there could be no text. Contextual properties (coherence) and internal properties (cohesion) are essential elements in the process of meaningful communication. A good text should consist of clauses which are constructed in coherent and cohesive structure. Moreover, the clauses hang together and relate to the context. However, EFL students still find it difficult to maintain the coherence and cohesion in both written and spoken texts. For this reason, I try to analyse the textual meanings in terms of Thematic structures and Thematic progressions displayed on recount texts of the 4th semester students of English Department, Semarang State University in the academic year 2016/2017 on the Genre-Based Writing course.

## METHODS

This study investigates what Thematic structures and Thematic progression are realized in students' recount texts, so this study elaborates the realization of the data analysis to find out the meanings realized from the data. Therefore, the qualitative approach was used to figure out the realization of the meaning. The object of the study is students' texts which include in discourse analysis. A discourse research is commonly a qualitative descriptive because it interprets and exemplifies social phenomena subjectively by the researcher's perspective in analysing what happen beyond the text. The qualitative researcher interprets the meaning of the data based on the investigation. Then, the result of investigation is presented descriptively in order to draw conclusion.

I employed qualitative approach to analyse the data. In addition, the quantitative approach was also used to produce some statistical data in calculating the findings in order to strengthen the qualitative analysis. Thus, the data can be reasonable and objective. The object of the study is recount text developed by 4<sup>th</sup> semester students of Genre-Based Writing course in English Department of Semarang State University in the academic year 2016/2017. The texts then to be analysed the Thematic structures and Thematic progressions to investigate the organization of the texts.

Thematic structures were analysed in order to figure out the point of departure and remainder of each clause. While Thematic progressions were examined to see the flow of information in the text that contained coherent and cohesion text. First, I read and choose 12 sample of the data (students' recount texts). Next, the texts were divided into clauses and given number of sequence per clauses from each text. Then, the clauses were analysed in terms of Theme and Rheme to figure out

the textual meaning of each text. On this step, the Thematic structures were classified into each category that had its own table to enable the result of the study to be easily understood. Furthermore, each sub-element was categorized and counted its frequency in percentage. Hence, it used quantitative approach besides qualitative analysis in order to support the data. Next, Thematic progressions were then analysed using arrows to see the flow of information in each clause developed to make a coherent and cohesive text. The last step was then interpreting and elaborating the result of the data.

In analyse the Thematic structures, firstly the text were divided into clauses. Then, each clause was given numbers (1, 2, 3, and so on) from the first clause to the last clause in the text. Thematic structure consist of Theme which is the starting point of the message in the clause, and Rheme which is the development of that starting point. Furthermore, each Theme was analysed based on the types of Theme, whether it was Topical, Interpersonal, or Textual Theme. Once Thematic structures study was completed, I examined the pattern of ideas among clauses within a text that is called Thematic Progressions. It was investigated to see whether the clauses make cohesive and coherent text. According to Eggins (2004: 324) “a final, but very significant, contribution that Theme makes to the cohesion and coherence of a texts has to do with how Thematic elements succeed each other”.

## RESULTS AND DISCUSSIONS

This study investigates the Textual meaning of 4<sup>th</sup> semester students' recount text on Genre Based Writing course. There were twelve recount texts taken from C's class of Genre-Based writing course. The result of this analysis was derived from Theme and Rheme system in each clause of the texts. This two points were used to uncover the Thematic structures and Thematic progressions of students' recount text. The Thematic structures were analyzed to indicate the types of Themes used by the students. The type of Theme will show the point of departure of the message that tell us about what the clause is going to be about. While Thematic progressions were analyzed to unveil the development of ideas and the flow of information on students' recount text in order to make a cohesive and coherent text. The results of the analysis are portrayed in tables, and they are followed by the interpretation of the result.

Eggins (2004: 301) states, “When an element of the clause to which a Transitivity function can be assigned occurs in first position in a clause, we describe it as a topical theme”. Furthermore, every clause only contain one topical theme, so once a topical Theme is identified, the remaining clause will be the Rheme. Table 4.1 below displays the Theme types used by the students in their recount texts.

Text	Clauses	Topical		Interpersonal	Textual
		Marked	Unmarked		
1	26	2	23	-	12
2	24	3	21	1	9
3	18	3	15	-	9
4	40	3	37	1	26
5	45	3	42	3	21
6	11	1	10	-	6
7	31	2	29	-	13
8	18	4	14	-	5
9	24	2	22	2	13
10	15	2	13	1	5

11	24	4	20	1	14
12	36	2	34	2	15
Total	312	31	280	11	148
(%)		9.93%	89.74%	3.52%	47.43%

Table 3.1 Theme Categories in Students' Recount Text

As showed in the table 4.1, there are three major Themes analyzed in students' recount text. They are topical, interpersonal, and textual Themes. However, in this case, topical Themes are divided into two patterns of Theme choice which are marked and unmarked. In the marked case, the topical Theme is not the subject and not what we normally expect to find. Whereas a topical Theme which is also the subject is unmarked topical Theme. The most frequent Theme used in overall recount texts is unmarked topical Theme with 89.74%. On the other hand, marked topical Theme takes insignificant part with 9.93%. Moreover, interpersonal Theme also shows minor number with 3.52% which also the lowest. It shows large contrast with Textual Theme which gets almost half of percentage with 47.43%.

The comparison between marked and unmarked Themes shows great difference in which unmarked topical Theme occurs 280 times, and marked topical Theme is used only 31 times. The marked topical Theme found in the students' recount text only the adverbial group and prepositional phrase. The contradiction between these two components is slightly different.

The next result of the analysis show that there is only one constituent of interpersonal Theme that exist. That is modal adjuncts which gets 100%. There is neither finite nor vocative. The last constituent that can occur in thematic position is the category of textual Theme. There are three kinds of constituent of textual Theme which are continuative, structural, and conjunctive adjunct. Structural get the highest point which is used 127 times followed by conjunctive adjunct with 20 times and continuative with only one time.

A clause must contain only one Thematic element (topical Theme), yet it is possible for clauses to have a sequence of Themes in which textual and interpersonal precede topical Theme. This group of Themes is then called multiple Theme. The pattern which contains textual Theme preceding topical Theme is mostly used by 135 times. The second multiple Theme in the students' recount texts is interpersonal-topical Theme. There are 9 interpersonal-topical Themes in the students' recount texts. The last one, both textual and interpersonal Themes that come before topical Theme occur only by 2 times.

The next analysis is about Thematic progressions in the students' recount texts which contribute to the cohesion and coherence of a text. The analysis was conducted using the theory of Thematic progressions from Eggins (2004: 324-326). There are three main patterns of Thematic progressions which are examined based on this theory, which are re-iteration (constant), zigzag (linear), and multiple (split). Those three patterns are served in the following table :

Text	Clauses	Re-iteration (Constant)	Zigzag (Linear)	Multiple (Split)
1	26	9	1	1
2	24	4	4	1
3	18	1	3	1
4	40	6	9	1
5	45	11	2	-
6	11	4	3	-
7	31	6	6	-
8	18	2	5	-
9	24	7	5	-

10	15	1	9	-
11	24	2	4	1
12	36	10	10	1
<b>Total</b>	312	63	59	6

Table 3.2 Thematic Progressions Patterns of Students' Recount Texts

The students mostly employ re-iteration pattern by 63 times, and zigzag pattern is also used 59 times. While multiple pattern is the lowest with 6 times. Re-iteration is the basic way to keep a text focused since repeating Theme will provide the text with a clear focus. Repetition is also an effective means of creating cohesion in text. While zigzag pattern gets cohesion by building on newly introduced information in a text. As suggested by Eggins (2004: 324), "In this pattern, an element which is introduced in the Rheme in clause 1 gets promoted to become the Theme of clause 2". Multiple Theme pattern as the last pattern get the lowest total from all the types of pattern. This pattern happens when the Rheme of a clause has different pieces of information, and each of which is taken in turn as the Theme of a subsequent clause.

## CONCLUSIONS

This study has analyzed textual meaning found in the 4th semester students' recount texts taken from Genre-Based Writing course. It investigates Thematic structures displayed and Thematic progressions employed in the students' recount texts. Based on the data analysis and the results of the study in the previous chapter, the conclusions can be drawn as follows.

Firstly, unmarked topical Theme is dominantly used in the students' recount texts compared to the marked one. As showed in the table 4.1, it gets the highest result with 89.74%. This occurs as students' recount texts mostly consist of declarative clauses which put subject in the beginning of the clause. In contrast, marked topical Theme gets small number in the students' recount texts. It only gets 9.93 % from whole texts. However, there are only two types of marked topical Theme found in the students' recount texts. They are adverbial group and prepositional phrase. Complement which put in the beginning of a clause is rarely found since it is uncommon to find a nominal group that is not functioning as subject. Moreover, interpersonal Theme which also the types of Theme occur in the students' recount texts with 11 times. Yet, modal adjunct is the one and only constituent of interpersonal Theme which is employed in the texts. It is used to show the writers' point of view and judgment. For instance, Actually, I wanted to go with my mother, but my mother had not prepared yet. From the example above, modal adjunct 'actually' means something that contrast with the writer' expectation. (Text 2, appendix 2)

The next type of Theme that occurs in the students' recount text is textual Theme. Structural, which is one of the constituents of textual Theme is dominantly used in the texts. It gets 85.81 % or 127 times. It is found that students apply some complex clauses in their texts. Hence, the students relate the complex clauses using structural. In addition, conjunctive adjunct is insignificantly used in the students' recount texts. It is used to connect a clause to preceding text. The last constituent of textual Theme found in the students' recount texts is continuative. It only happens once which signaling that a new move is beginning.

The next conclusion is about thematic progressions employed in the students' recount texts. It is how the students organize their ideas in order to make coherent and cohesive text. As showed in the table 4.6, re-iteration is the dominant one with 63 times. It happens because one of the easiest ways to keep a text focused and is to re-iterate an element. It makes sure that text is going nowhere. Next, zigzag pattern with 59 times. This pattern achieves cohesion by developing idea in the preceding information. The last, multiple pattern with only 6 times. However, it is also found

that many clauses in the students' recount texts do not employ any pattern. They use different Themes in each clause. Although those Themes support the previous Theme, it is considered to have less cohesion.
