Abstract

Article History: Accepted 09 May 2022 Approved 04 July 2022 Published 23 December 2022

Keywords: Implementation, Differentiated Instruction, the Practice of TEAL Teaching preparation plays a vital role in teaching as the preparation which describes the elements will be used in teaching. It provides the basis for instructional focus and content. This research is aimed to describe the implementation of Differentiated Instruction Lesson Plan for Junior High School Students in The Practice of Teaching English For Adult Learners (Teal) Course In The Second Half Of 2021 At Satya Wacana Christian University. This study was described from the perspective of qualitative research which employ a case study design which observed which focuses on analysing and describing the development of lesson plan, implementing lesson plan, Differentiated Instruction, and the practice of teaching in compatible Kurikulum Merdeka for Junior High School students in The Practice of TEAL course. The subject of this study were 8 studentteachers joining the Practice of TEAL course (microteaching) in the second half of 2021 at Satya Wacana Christian University, Salatiga who participated in the research. Whereas, the object of this study was the teacher -trainees designing a Differentiated Instruction lesson plan for Junior High School students and its implementation in the Practice of TEAL course. To collect the data, the researcher used questionnaires, written interview, and classroom observation and all of the items were analysed qualitatively using content analysis. The result of this research showed that first, teacher-trainees had fulfilled all the elements in designing the lesson plan (identity, Objective of Learning, Learning Material, Learning Activity, Selection of Media, Selection of Learning Source, and Evaluation). Secondly, teacher-trainees had made the differentiation of learning visible in their teaching, in terms of readiness, learning profile, and interest. In addition, the researcher found out that most teacher-trainees had made progress in the most frequently occurring weaknesses from the first teaching to the next four but however they found most difficulty in formulating the objective of the learning. Lastly, the research described the effectiveness of Differentiated Instruction Lesson Plan since it facilitated supportive learning for heterogeneous learners.

INTRODUCTION

A Successful teaching-learning process depends much on good planning. It is high time for teachers to design a good lesson plan to facilitate meaningful learning for students. According to Brown (2001), the lesson plan has a pervasive influence on successful teaching-learning activities. The planning process provides a framework to select goals, activities, and assignments relevant to knowledge, skills, and attitudes (Cooper, 1990).

Moreover, the lesson plan offers appropriate assessments that make the planning process complete (Hunter, 1994, p. 87 cited by Jalongo et al., 2007, p. 42). To be an effective teacher, one needs to creatively synthesize his understanding of second language acquisition and language teaching pedagogy. He must accommodate the curriculum, and the teaching context to make a classroom that facilitates all the pieces of learning experiences fit together comes to reality.

Research has found that lesson plan, the planning and organizing Lesson brings advantages to teachers because it enables them to structure the teaching/learning process that helps to avoid uncontrolled improvisation (Rodriguez, 2014). Further, Hammer (2006) stated that lesson planning is the art of combining several different elements into a coherent whole so that the lesson has an identity that students can recognize, work with and react to. It means that any lesson plan encompass numeral fundamentals ranging from the time allocated, the students" level, the material used to finish up with the objectives, and the homework. In addition to Hammer, Woodward (2001) postulated that lesson planning is not only a piece of document. It is everything a teacher does when he is thinking of the next lesson such as visualizing, reading resources, or even staring at the ceiling. Meanwhile, Reed & Michaud (2010) believed that the lesson planning process allows teachers to evaluate their knowledge concerning the content of teaching.

In Indonesia's teaching context, a lesson plan is a core activity for teachers. It is the basis

of the three teacher responsibilities, i.e.: planning, implementing and assessing as stated in the Ministry of Education Regulation Number 21 Year 2016 about Standard of Content (planning), number 22 about Standard of Process (implementing), and number 23 about Standard of Assessment (assessing). In planning the lesson, teachers must be able to design meaningful learning for students which meets requirements of 21st-century learners-- the ability to be critical, creative, communicative, and collaborative. The second responsibility is implementing the lesson plan. The lesson plan designed should be mirrored in the teaching which later is evaluated and improved in the next planning design. The third responsibility is assessing in which according to the decree assessment must reflect the lesson plan and teaching process which measured the three domains of affective, knowledge, and psychomotor.

The launching of the "Merdeka" curriculum last December 2019 brings about a massive change in the lesson plan design. The implementation of Differentiated Instruction urges the teacher to facilitate students' uniqueness in terms of interest, readiness, and learning profile into the learning process. The teacher must do the mapping to identify the students' learning needs and then designs the learning which fits the students' diverse needs. Therefore, research in designing Differentiated Instruction lesson plans and its implementation in teaching practice is needed.

The scope of this study is explaining how teacher-trainees design Differentiated Instruction lesson plans for Junior High School students and the implementation in the Practice of TEAL course at Satya Wacana Christian University, Salatiga. In addition, the study also considers the difficulties encountered by teacher trainees in designing the lesson plan and its implementation for Junior high School students and how teacher-trainees solve the obstacles. This study also focuses on explaining how teacher-trainees improve their lesson plan and teaching qualities in the Practice of TEAL course and the

effectiveness of the Differentiated Instruction Lesson Plan for Junior High School Students.

METHOD

This study was described from the perspective of qualitative research which employed a case study design which observed the characteristics of an individual unit, that was a group (Cohen and Manion, 1994: 106). The study focuses on analysing and describing the development of lesson plan, implementing lesson plan, Differentiated Instruction, and the practice of teaching in compatible Kurikulum Merdeka.

It is assumed that there were some difficulties faced by student-teachers in developing a Differentiated Instruction lesson plan, implementing the lesson plan, and improvements on their lesson plan and teaching performance. It is also assumed that the student-teachers had some alternative and creative ways of solving their obstacles in lesson planning and the implementation. Moreover, they also found out the obstacles as resources for improving their competencies in designing their lesson plan and the teaching practice in EFL classroom.

The subject of this study were 8 student-teachers joining the Practice of TEAL course (microteaching) in the second half of 2021 at Satya Wacana Christian University, Salatiga who participated in the research. Whereas, the object of this study was the teacher –trainees designing a Differentiated Instruction lesson plan for Junior High School students and its implementation in the Practice of TEAL course.

The unit analysis of this research was the student-teachers in The Practice of TEAL course in Satya Wacana Christian University, Salatiga as well as their teaching documents such as lesson plans, teaching videos, lecturer's feedback, reflection journals, and evaluation items.

In this study, I used questionnaires, written interviews, and classroom observation in collecting the data. The respondents were given a questionnaire which consisted of questions about lesson plan designing using the Differentiated Instruction approach and its implementation and then, I observed their practice of teaching. The

respondents were interviewed to know whether there were problems in designing the Differentiated Instruction and implementing the lesson plan in the practice of teaching in the EFL classroom. They were also questioned on how they improve their lesson planning and teaching skills. The results were analysed to find out the compatibility with the Kurikulum Merdeka in general and Differentiated Instruction in particular. All of the items were analysed qualitatively using content analysis. Below is the table shows the instruments used in this study:

This study used the theory of data collection procedures in qualitative research. Since it was a case study research, the data were analysed under principles of analysis method for case studies which is referred to as OTTR. It stands for "observe," "think," "test," and "revise." Analysis must be an iterative process whereby the initial observations are reflected upon and shape subsequent data collection. Observe -- initial observations are made and tentative hypotheses are formulated. Think -consideration is made of what additional information must be collected to rule out alternative explanations or confirm initial hypotheses. Test -- additional information is collected through subsequent observation or review. Revise -- analysis of subsequent observations and review occurs, and initial hypotheses are re-examined.

In this study, the data was presented in tables, charts, as well as description of the analysis. The description was elaborated in depth to reveal the findings of the study.

For data validation, the researcher used Triangulation of Sources in which the data is examined in depth by various sources of data. The aim of this study was to provide data on the designing lesson plan and its implementation using a Differentiated Instruction approach under the scope of Kurikulum Merdeka.

RESULTS AND DISCUSSIONS

The finding showed that the implementation of Differentiated Instruction

Lesson Plan for Junior High School students had driven some effectiveness in teaching, as follows:

1. The Teacher-trainees Design of Differentiated Instruction lesson plans

The information from the rubric for Lesson Planning in the following table explained how teacher-trainees design the Differentiated Instruction lesson plans for Junior High School students in The Practice of TEAL Course:

From the table, the researcher concluded how the teacher-trainees develop the Differentiated Instruction Lesson Plan. There are seven elements of the lesson plan that will be discussed in this section. They are (1) identity;(2) Objective of Learning; (3) Learning Material; (4) Learning Activity; (5) Selection of Media; (6) Selection of Learning Source; and (7) Evaluation.

The findings showed that teacher-trainees did not find difficulty designing the required lesson plan. Almost all of them fulfill the criteria.

The use of the Differentiated Instruction learning process was visible in almost all teaching, only one failed to facilitate the Differentiated Instruction learning process at the first teaching but he made improvements in the next teaching. Moreover, they also followed the steps or procedures for learning activities that are carried out in accordance with the Differentiated Instruction procedure of the approach used; only one failed to go with the procedures.

In addition, all teacher-trainees provided learning activities which include preliminary, core, and closing stages and are accompanied by time allocation in each stage and facilitated active, creative, scientific and fun learning activities in accordance with the principles of Independent Learning; only one failed to fulfill all the aspects mentioned previously. They also facilitated the learning steps which reflected the direct and concrete experience. In the media usage, All teacher-trainees chose the media which were in accordance with the learning objectives, learning materials, class conditions, student needs, and paying attention to safety.

All teacher-trainees included printed materials (books, handouts, etc.), electronic teaching materials (IT), and the surrounding environment, and paid attention to the relevance and updating. Some of them created a very welldesigned PowerPoint presentation which really helped students' comprehension. They also adapt the materials from websites 1ike https://en.islcollective.com/ and adjust them to the student's needs and levels. Most teachertrainees created various handouts for the differentiation learning which were suitable for the students since they had considered the students' needs and levels from the diagnostic

Almost all teacher-trainees designed the assessment required that includes aspects of attitude, knowledge, and skills. They had fulfilled the requirements of evaluation that were suitable to the objectives and/or achieved competencies (KD/indicator). For the knowledge, those assessments include grids, and tests/questions, planning/providing enrichment activities for students who have more abilities, and

planning/providing remedial for students who have fewer abilities. However, they did not provide answer keys. For the attitude and skill aspect, they provided instruments and the scoring rubric.

The Teacher-trainees Implementation of their Differentiated Instruction lesson plans

The information from the rubric for Teaching Practices in the following table explained how teacher-trainees design the Differentiated Instruction lesson plans for Junior High School students in The Practice of TEAL Course:

Table 2. Rubric for Teaching Practices Assessment

their learning profile in the

Differentiation by students' learning profile

- learning process.

 Teacher-trainees balance competitive, collegial, and independent work arrangements.
- d. Teacher-trainees develop; miss some part of correction and feedback activities that seek multiple perspectives on topics and issues.

Based on the result as shown in the above table, the researcher found the three differentiation as suggested in "Kuriulum Merdeka" learning process conducted by the teacher-trainees as follows:

Students' readiness

To identify the readiness of the students, the teacher-trainees designed a diagnostic test instrument based on the topic which was going to be discussed in their teaching and assigned the students to do the test via Google form. The result was analyzed and then was used by the teacher-trainees as the basis to develop the varied teaching materials in their lesson plan to be implemented in their teaching.

In the teaching process, the teacher-trainee grouped the students based on their level of understanding (Upper, Middle, and Lower). The instructions were delivered in a more specific, detailed way and slower pace on how to complete the tasks so that the weak students will comprehend the instructions well and they did two ways in delivering the direction, i.e.: by direct explanation classically and visiting each student directly to ask which part they did not understand to guide them and explain more detailed about the lesson or direction about the tasks. They also used scaffolding and varied the pace of the student's work. The amount of teacher assistance was sufficient and more portions were given to the lower group. The language used was also varied and increased from the first to the next teaching to facilitate the heterogeneous levels of the students.

1. Students' interest

In some activities, teacher-trainees used both like-interest and mixed-group interest identified from the diagnostic test orally, conducted by the teacher-trainee in the class, about the topics which were going to be discussed. This differentiation was visible when designing the lesson plan, and teacher-trainees provided variations of topics for the learning. Students were given the freedom to choose the topic they liked and did the exercises on the given handout based on the topic chosen. They worked in their group and presented the result of the discussion in front of the class.

Some teacher-trainees involved the students in designing the task by asking what they wanted to learn in their next meeting. This was becoming the basis for the teacher-trainees in designing the materials. The students followed the teachers to stick the task on the whiteboard until the students could accomplish it. The students also participated in designing the task given by teachers while working in a group. The teachers allowed them to prefer and give their opinion on which way the task would solve. Some students preferred to solve the tasks based on the example given by the teacher and some students preferred to do the task by modifying the example: it could be a short or long explanation. The teachers gave an example of solving the task or assignment then the students could decide in what version they want to do the task.

Students' learning profile

Based on the findings of observation in the classroom, the implementation of differentiated instruction according to students' learning profile were visible in some activities in the classroom. Teacher-trainees used categorized-grouping to decide the activities done in the classroom. Based on the diagnostic test, the teacher-trainees had the information about the students' learning profile in terms of visual, auditory, and kinesthetic. For visual groups, teacher-trainees provided pictures, ppt (PowerPoint presentation on the topic), or flashcards to present the material. For auditory groups, they provided videos or records related to the topics, and for the kinesthetic groups they

provided activities to create something in line with the topic. In the narrative class, a teacher-trainee assigned the students to do role play or drama and create a new song from the existing one by changing the lyrics according to the topic.

In the learning process, teacher-trainees invited the students to learn based on their learning profile. In this stage, when a teachertrainee decided the topic, he/ she invited the students to learn differently. In one classroom setting, the students learned in different ways. The visual group learned the materials by observing a picture in a contextual setting related to the topic or studying the PowerPoint presentation made by the teacher-trainee. In contrast to the visual group, the auditory group learned the materials by watching a video. They did it in the classroom or in the language laboratory or computer laboratory by putting on a headset so that they did not disturb the other students who were learning in a different way. Lastly, in the kinesthetic group, since they did creative work related to the topic, they did it outside the classroom (in the library or outdoors). In this way, they did not interfere with the other students' learning activities.

Furthermore, teacher-trainees facilitate a collaborative and competitive atmosphere through group activity. Since the learning process was initiated by a diagnostic test, the students learned in their new community. They shared ideas here and worked out the assigned task together. The spirit of a collaboration facilitated students with practice of dealing with others in a mutualism relationship. The opportunity to compete among the students was equal. In the classroom, all the students could speak, give the question, or perform the task in group or independent, and in all of the activities, the teachers tried to engage all students to take part. The researcher found that all of the students have the same opportunity to ask their questions. Then, all of them also had the same chance to perform the tasks in order to compete with another group, did handwriting, and pointed out the pictures. The teachers organized the activities fairly.

The Teacher-trainees Improvement of their lesson planning and teaching.

The Teacher-trainees Improvement of their lesson planning.

The finding was derived from the analysis of the teacher-trainees reflection journals in The Practice of TEAL course. Table 4.3. explained how the teacher-trainees improved their competencies in lesson plan designing. The improvement they made could be seen in the lesson plan they designed for the next teaching.

Table 3. The Teacher-trainees Improvement in Lesson Plan designing

From the table above, the researcher found out that teacher-trainees had had made progress in the most frequently occurred weaknesses from the first teaching to the next, as follows:

The Formulation of Learning Objective

Most teacher-trainees failed to formulate the required learning objective in their first teaching. Most of them missed one or two competencies of the goals of the learning and the elements of ABCD (Audience, Behavior, Condition, and Degree) was not completely visible. After receiving the feedback, some of them made improvements right away in the next teaching but some others delayed the process until the third or fourth teaching.

The Learning Materials designed by the teacher-trainees

In the first teaching, most teachers designed quite well-arranged materials for the learning with sufficient activities and tasks which are suitable for the learning needs. However, the exercises were too simple, not challenging; need more exercises that encourage students' practice their 21st century skills. Some of the teaching materials were not in line with the students' needs. Some of them did not formulate the differentiation in the learning activities.

In the next teaching, some of the teachertrainees made progress immediately in the material design, including the differentiation, and related the materials with the needs of 21st century skills but some others did not improve their materials until the third and fourth teaching.

The Audio-Visual Aids (a.v.a) used in the learning process

As we know that media plays very important roles in enhancing the quality of communication between the teacher and the learner. In the first teaching, all students used media in their learning. They used pictures on slides, powerpoint presentations, short videos that help students comprehend the topic of the learning. However, some students did not choose the media properly, like the videos for example, that were not really relevant to the learning needs; too simple or too complicated; the pace was too fast or too slow.

The next teaching, some teachers made progress and provided the more appropriate a.v.a in their teaching but some others did it until the third or fourth teaching.

The assessment

In the first teaching, most teachers constructed the exercises that were too simple, not challenging; and needed more that encouraged students' practice their 21st century skills. This occurred in the second teaching as well. In the third teaching, teacher-trainees started to make progress in developing the exercises.

In addition to the construction and content, all teachers did not provide key answers for the exercises. Some teachers responded to the feedback by providing key answers in the second teaching but some others delayed the change until the third or fourth teaching.

The Post-Teaching Activity

The most occurred weaknesses in the postteaching activity when designing lesson plans were the reflection, remedial and enrichment activity.

In learning, reflection plays important roles because it will provide information on the learners' comprehension, shortage, and improvements in their learning. However, most teacher-trainees failed to include reflection in their lesson plan. In the first teaching, all teacher-trainees did not provide a reflection session in the

lesson plan. This was not visible for some teachertrainees even until the last teaching.

In addition to reflection, remedial and enrichment activities were also crucial. In the teaching practices, most teacher-trainees did not provide remedial and enrichment activities. After the feedback was delivered, some of them made progress by adding the remedial and motivating enrichment activity in their lesson plan but some others did not really make progress. They did not until the third or fourth teaching and even not at all until the last teaching.

Improvement in Teaching Practice

Table 4 explained how the teacher-trainees improved their competencies in delivering their lesson plan. The improvement on the teaching skills they made could be seen from the weakness of the teacher-trainees during the teaching practice in the microteaching and the changes of their performance in the next teaching.

From the above table, the researcher summarized the development of the teacher-trainees skill in implementing the Differentiated Instruction in three categories, as follows:

The pre-teaching activity

Almost all teacher-trainees provided pre-teaching activities in their first teaching but some failed to build an interesting atmosphere that could boost their students' motivation in the learning. At the next meeting some teacher-trainees made quite a good improvement; provided interesting pre-teaching activities using pictures, videos, gym, or short stories told by the teacher to stimulate students' curiosity and interest.

The whilst teaching activity

Most teacher-trainees had made a lot of progress from the first teaching to the fourth as follows:

a. Differentiation in the learning process

Almost all teacher-trainees designed Differentiated Instruction activities in their lesson plan but in the first teaching, some did not show the differentiation in the learning process. The lecturer's feedback on the first teaching motivated them to facilitate the differentiation in the learning in the next micro-teaching. One teacher-trainee did not facilitate the differentiation after the third teaching although he mentioned it in the lesson plans.

Presentation of the materials

From the table above, the researcher found that teacher-trainees had made a lot of improvements in the third and fourth teaching. Some talented teacher-trainees were not facing crucial problems during their teaching practice.

In terms of language use. Some students still committed errors in pronunciation and grammar though not major and also faced difficulties in using both languages—the target language and the first language at the right portion.

In addition, teacher-trainees failed to present a question-and-answer activity effectively at their first teaching. Almost all students asked questions but they did not wait for the students to answer. They also did not provide creative ways of asking questions like Keep asking why or following every answer with a question that challenges the students. In the second, third, and fourth teaching the teacher-trainees had shown their great effort to conduct the question-and-answer activity effectively.

Apart from the two elements mentioned above, teacher-trainees also failed to perform various activities that encourage the students to think critically during the first teaching. Some teacher-trainees made progress very soon in the second and the rest teaching but one should wait until the third or fourth teaching.

Last but not the least, all teacher-trainees used adequate and appropriate a.v.a (audio visual aids) but

some were not carefully chosen at the first teaching. The power point presentation designed by some teacher-trainees did not yet provide sufficient assistance for student's comprehension on the topic discussed; too wordy, not interesting, too small letters. From the feedback, they provided better a.v.a so that it effectively facilitated sufficient aid for the students in the learning process.

Classroom management and time management

Teacher-trainees classroom quite well during the learning process. Most of them conducted very good teaching; creative, interactive, challenging, interesting, and motivating but not really facilitating a studentcentered learning at the first teaching; teacher still posed himself/ herself as the main source of learning and actor. After the feedback was given, the teachertrainees made some improvements. Most of them were aware of their weaknesses but one teacher-trainee (S2) made the same mistakes in the second and third teaching. He made a better improvement in his last teaching.

The second element that teacher-trainees often failed to manage was the group work management. Most teacher-trainees found difficulty in implementing the group work activity. Some of them designed good and challenging activities that were appropriate for the Differentiated Instruction classroom. Somehow, the implementation in the classroom was not so successful in the first and second teaching; one teacher-trainee even forgot to provide the differentiation process. In the next teaching, the teacher-trainee showed good progress in managing the group work based on the differentiation.

Interaction

Most teacher-trainees facilitated interactive teaching but did

not really provide adequate chances for students to practice the target language. Most teacher-trainees still spoke much Indonesian so that the students did not get sufficient exposure to the target language. Most of them did a one-way communication so that the learning process sounded teacher-centered. The teacher-trainees made good progress in the next teaching session. One student still did the same thing until the third teaching.

The post teaching activity

Post-teaching activity is equally important that each activity is meaningful, and ensures student development and advancement through the lesson. They should enable students to engage with and develop their skills, knowledge, and understandings. One of the post-teaching activities that the teacher-trainees failed to build was the reflection at the end of the session. All teacher-trainees did not provide a reflection in the first teaching. After the feedback was given, they tried to provide one in the next teaching.

In addition to reflection, many teacher-trainees did not provide enrichment activities during the first teaching. Some teacher-trainees provided this kind of activity but did not really motivate students to develop their critical thinking. The activities were merely a repetition of the previously discussed in the classroom.

The Effectiveness of the Differentiated Instruction lesson plan

To answer this question, the researcher used the data from the questionnaire of the teacher-trainees' after completing their teaching practices in the Practice of TEAL course. Table 5 explains the effectiveness of Differentiated Instruction for teaching practices.

Table 5. The Effectiveness of Differentiated Instruction for Teaching Practices

| Instruction fo | r Tea | ching Practices | | |
|-----------------|-------|---|------------|----------------------|
| Questions | S | Answer | • | |
| What is your | S1 | In my opinion, Differentiated | <u>.</u> ' | |
| opinion about | | Instruction is a good process of | | |
| Differentiation | | learning because it pays attention | | |
| Instruction in | | on the students' uniqueness. | . 1. | Do you |
| the learning | S2 | I think, Differentiated Instruction | | think it |
| process? | | is a pedagogical-didactical | | is offortive |
| | | approach that provides teachers | | effective for the |
| | | with a starting point for meeting | | teacher? |
| = | S3 | students' diverse learning needs. My opinion about Differentiated | • | Explain |
| | 55 | Instruction learning that is | | in |
| | | tailored to the needs of students | | detail. |
| | | with the aim of maximizing the | | |
| | | potential of each student because | | |
| | | each student has different needs or | | |
| | | learning processes. DI is | | _ |
| | | structured based on student | | |
| | | differences which include learning | | |
| | | readiness, interests, and learning | | |
| | | profiles designed by differentiating | | |
| = | C.4 | content, process, and product. | | |
| | S4 | I think, differentiated instruction learning process consume a lot of | | = |
| | | preparation time for the teacher. | | |
| | | however, it encourages the | | |
| | | teacher's creativity in designing | | |
| | | activities. Also, it motivates the | | |
| | | students in the learning process | | |
| | | since the way students learn is in | | = |
| | | accordance to their interest, | | |
| _ | | learning style and abilities. | | |
| | S5 | I think differentiated instruction is | | |
| | | the learning process based on the | | |
| | | students' abilities. It is a learning | | |
| | | process that contains some | | |
| | | activities that make the students comfortable to do it. So, the | | = |
| | | students feel happy and no tension | | |
| | | in the learning. | | |
| = | S6 | In my opinion, it is appropriate | • | |
| | | for students since the students can | | |
| | | learn according to their abilities. | | |
| | | Therefore, the learning will be | | |
| | | more meaningful and fruitful for | | |
| | | students. Besides, through | | |
| | | differentiated instruction learning, | | |
| | | the teacher can provide the | | |
| | | learning process creatively that will motivate students in joining | | |
| | | the lesson. However, it might not | | |
| | | suitable for some schools because | | |
| | | they do not have adequate facilities | | |
| | | especially technology that can | | |
| _ | | help them to design the learning. | | |
| - | S7 | I think Differentiated Instruction | | |
| | | is a good approach for teaching | | |
| | | because it looks at the students' | | |
| | | different needs, interests, and | | - |
| - | 00 | learning styles. | | |
| | S8 | In my opinion, it is a kind of | | |
| | | approach in conducting the EFL | | |
| | | lesson by matching with the students' learning style. The | | |
| | | lesson is planned differently | | |
| | | according to the students' needs. | | |
| | | This may be overwhelming for the | | |
| | | teacher because he/she has to | | |
| | | prepare and provide more than | | |
| | | • | 701 | |

| | | | one activity. DI instructed the |
|----|-----------|------|--|
| | | | students to involve in the lesson. It |
| | | | can be in the form of group work |
| | | | or presentation. The students' |
| | | | performance is important because |
| | | | this approach is also in line with |
| 1. | Do you | S1 | student-centered approach. It is effective for teachers since it |
| 1. | think it | 31 | motivates teachers to consider |
| | is | | different needs of their students. It |
| | effective | | also encourages teachers to be |
| | for the | | creative because they have to |
| | teacher? | | design various learning materials, |
| | Explain | | strategies, or techniques to meet |
| | in | | the students' varied needs. |
| | detail. | S2 | I think this learning is very |
| | | | effective for teaching because it |
| | | | provides an instruction and |
| | | | learning that developing student |
| | | - 62 | needs in their learning. |
| | | S3 | This learning is effective for teachers because it only provides |
| | | | instructions and learning that will |
| | | | be developed by students |
| | | | according to the needs of their |
| | | | learning process. |
| | | S4 | For the teacher, its effective |
| | | | because the teacher does not need |
| | | | to explain the whole material to |
| | | | the students since the students are |
| | | | facilitated to learn the material by |
| | | | themselves first. |
| | | S5 | For teacher it is effective because |
| | | | teacher can design many activities |
| | | | based on instruction, students' |
| | | | interest, learning profile and etc. It |
| | | | can make the teacher think how to teach in creative way so the |
| | | | students will more interested in |
| | | | joining the class. |
| | | S6 | In my opinion, it is effective for |
| | | | both the teacher and students. |
| | | | First, it will help the teacher to |
| | | | understand students' abilities |
| | | | about the material. Thus, the |
| | | | teacher can design the material |
| | | | that suits students' abilities. |
| | | | Besides, by using differentiated |
| | | | instruction learning, the teacher |
| | | | are also given the opportunity to |
| | | | design the activities and tasks creatively that will reduce |
| | | | students' boredom in the |
| | | | classroom. Nowadays, students |
| | | | tend to be bored when they only |
| | | | listen to the teacher explanation. |
| | | | So, through the differentiated |
| | | | instruction learning, the students |
| | | | will be more interested in joining |
| | | | each task and activity since the |
| | | | teacher have provided attractive |
| | | | task and activity. |
| | | S7 | In my opinion, Differentiated |
| | | | Instruction is effective for teachers |
| | | | because they can figure out the |
| | | | students heterogenous nature in their class. It also effective for |
| | | | teachers' professionalism because |
| | | | every time they are about to teach, |
| | | | they must design various activities |
| | | | that provide suitable context for |
| | | | their heterogonous students. |

| | | S8 | This is effective because the teacher can deliver the appropriate material for each learning style. Even though the teacher has to provide different kinds of activities, they can make the process of the learning simpler in the classroom. The teacher does not need to explain the whole material but lets the students learn through their style. Also it motivates teachers to be creative and flexible. Although teachers need a lot of time for teaching preparation, they will get the benefit from the practice of | abilities so that they were not burdened. Beside that, they will do the task given easily since the teacher has provided suitable task for the students. So, it will help the students in understanding the material learned. S7 I think Differentiated Instruction is effective for students because it provides variety of topics and students may learn with their own styles of learning and pace. Not all students are fast learners and learn in the same ways. It also boosts their motivation because they are allowed to study with their own |
|----|--|----------|--|---|
| 2. | Do you think it is effective for the students? | S1 S2 | managing students' various needs. It is effective for students because they have the chance to study with their own pace, interest, and style. In addition, students will also feel that learning is enjoyable because they like it; there is no force to learn. This is effective for students because with this teaching | S8 The material motivates them to learn and practice more to be able to apply the material in the real world. The students will be instructed to do the task that matches to their learning style. This may raise their interest and willingness to learn the material. |
| | detail. | | learning that only focusing on student needs. This learning get student's need, maximizes the quality of student learning, increases student motivation, makes students more involved and focused in class, enables students to relate learning to life, hones student self-management skills, and improves student achievement. | From the above table, the researcher summarized the teacher-trainees stance on the effectiveness of Differentiated Instruction for teaching practices, as follows: Question 1: What is your opinion about Differentiation Instruction in the learning |
| | | S3 | This is very effective for students because teachers only need to | process? |

t

To sum up the teacher-trainees opinion about Differentiated Instruction learning process is that it is a pedagogical-didactical approach that provides teachers with a starting point for meeting students' diverse learning needs. It is a good process of learning because it pays attention to the students' uniqueness. In addition, it is tailored to the needs of students with the aim of maximizing the potential of each student because each student has different needs or learning processes. In this Differentiated Instruction learning process, the learning is structured based on student differences which include learning readiness, interests, and learning profiles designed by differentiating content, process, and product.

Moreover, since Differentiated Instruction learning consumes a lot of preparation time for the teacher, it encourages their creativity in designing activities. the teacher can provide the learning process creatively that will motivate students in joining the lesson. However, it might not be suitable for some schools because they do not have

adjust to the different needs of students. If it is reached, then

students will get the material to

the maximum with the skills they have. This learning get student's

need, maximizes the quality of

student learning, increases student motivation, makes students more

involved and focused in class.

enables students to relate learning to life, hones student self-

management skills, and improves

student achievement.

it is effective for the students

because the activities in the

learning process do not make the students feel bored and its

effective to reach higher

achievement since the material is learned in accordance with

students' interest, learning style,

and abilities. For students, it is effective because

the students can choose the

activities based on their ability, learning style. So, that activity

can help them in understanding

the materials easily beacuse they

will not bored and happy in

S4

adequate facilities, especially technology that can help them to design the learning.

For students, Differentiated Instruction learning motivates them to engage in the learning process since the way students learn is in 3. accordance with their interest, learning style and abilities. It accommodates some activities that make the students comfortable to do it. So, the 4. students feel happy and no tension in the learning. For them, learning will be more meaningful and fruitful.

Question 2: Do you think it is effective for the teacher?

The research found out the effectiveness of Differentiated Instruction learning process in terms of the followings:

- 1. It motivates teachers to consider different needs of their students;
- 2. They can figure out the students' heterogenous nature in their class.
- 3. It is effective for teachers' professionalism because every time they are about to teach, they must design various activities that provide suitable context for their heterogonous students.
- 4. It encourages teachers to be creative because they have to design various learning materials, strategies, or techniques to meet the students' varied needs. Teachers have the opportunity to design many activities based on students' interest, learning profile and readiness. It will make the teachers think how to teach in creative way so the students will be more interested in joining the class.

Question 3: Do you think it is effective for the students?

The research found out the effectiveness of Differentiated Instruction learning process in terms of the followings:

- 1. It is effective for students because they have the chance to study with their own pace, interest, and learning style. Not all students have the same pace of learning, what they like to discuss, and the way they learn;
- 2. It motivates students to get involved in their learning since teachers do not explain the

- whole material to the students but they are facilitated to learn the material by themselves first which is good to practice their literacy and critical thinking skills;
- 3. Students will also feel that learning is enjoyable because they like it; there is no force to learn;
- 4. The in-context learning will facilitate a link between the lesson and their real life. Thus, they will motivate them to learn and practice. The students will be instructed to do the task that matches to their learning style. This may raise their interest and willingness to learn the material.

This section presents the discussion based on the findings of the study. It is concerned about the implementation of the Differentiated Instruction Lesson Plan for Junior High School students in the practice of TEAL course.

The Teacher-trainees Design of Differentiated Instruction lesson plans

According Mulyasa (2011) states that a lesson plan is a plan which describes procedures and management of study in order to reach one or more basic competencies regulated in the Standard of Content and extended in the syllabus. It directs a teacher in the appropriate direction toward achieving predetermined objectives. It also aids a teacher in assessing and evaluating themselves in order to apply new tactics and strategies. In other words, lesson planning is a daily task for each class which a teacher is going to teach.

Based on the research, teacher-trainees had designed sufficient lesson plans as required in Kurikulum Merdeka. They fulfilled the three basic components of Merdeka Lesson Plan, i.e.: Goal of learning, learning activity, and assessment. They also accomplished the differentiation of the learning process in terms of interest, readiness, and learning profile. Moreover, they also completed the additional elements for lesson planning such as the learning materials and media employed in their teaching.

Based on the data of the findings above, it can be said that lesson planning provides good

guidance for teaching and learning as shown in Table 4.

The Teacher-trainees Implementation of their Differentiated Instruction lesson plans

The theory of multiple intelligences (MI) as postulated by Gardner helps teachers to find out the preference and discover different learning styles and family backgrounds, readiness, gender, culture and ethnic are all affected factors for students' diversity (Heacox, 2002 as cited in Ruhan Karadag, 2010).

The research had shown that the implementation of the Differentiated Instruction lesson plan had brought about the essence of differentiation in learning. As shown in Table 4.2 that teacher-trainees had designed three types of differentiation (readiness, interests, and learning profiles) in their lesson plans and implemented the plans into teaching practice for Junior High School students in the Practice of TEAL course.

The findings from the data thus postulated the teacher's concerns in students' multiple intelligences by means of differentiating the learning process.

Teacher-trainees Improvement of their lesson planning and teaching

The data (table 4) collected from the rubrics (lesson plan and teaching rubrics) described the improvement of teacher-trainees skills in designing the lesson plans and putting them into practices.

As stated by Bransford, et.al (2005) preservice teacher education program aims to prepare for graduation to become a qualified teacher equipped with teaching practices that will provide experience and knowledge to meet increasing demands associated with the teaching profession. The quality of teaching lies in good theory and the best methods available can be used in teaching. Furthermore, pre-service teachers have challenges in teaching practice.

In addition to Bransford, Ali et al. (2014) proposed that there are some challenges faced by pre-service teachers in teaching practice. First is individual challenges. Those challenges might make pre-service teachers fail in teaching

practice. They are managing classroom and preservice teachers" discipline, planning lessons, managing relief teaching, inadequate teaching and learning facilities and resources, overcoming disruption of lessons, and teaching practice administration and management.

As shown by the data, teacher-trainees improved their lesson planning and teaching in their teaching practices course. From the first teaching to the last, they made a very great effort in both lesson plans and their implementations.

The effectiveness of the Differentiated Instruction lesson plan

According to Hall et al. (2014), differentiation is a strategy that supports instructors in addressing each student's individual level of readiness, interest, and Teachers who employ learning profiles. differentiated instructional strategies will usually adjust the elements of a lesson from one group of students to another with regard to their readiness, interests, and learning profile so that those who may need more time or a different teaching approach to grasp a concept get the specialized assistance they need, while those students who have already mastered a concept can be assigned a different learning activity or move on to a new concept or lesson.

Data collected from the students' response showed a strong positive response from the participants on the Differentiated Instruction learning process. Tabe 4.4. showed that the effectiveness is both for teachers and students. The implementation of Differentiated Instruction lesson plans affected teachers' creativity in conducting the learning since their students are heterogeneous and students' engagement in their learning as it is suitable to their needs, level of competencies, and style of learning

CONCLUSION

Based on the analysis of the lesson plan documentation, teaching observations (zoom), teacher-trainees reflection journals, lecturer's feedback and questionnaire, this study to a certain extent was successful in several aspects.

Basically, teacher-trainees had shown a relevant progress to the requirements of "Kurrikulum Merdeka " lesson planning. They had met the components of the Lesson Plan development and conducted differentiation in their teaching, i.e.: readiness, learning profile, and interests. The findings revealed that the effectiveness of the Differentiated Instruction lesson plan for Junior High School Students in the teaching practice brought about many positive impacts for both the teacher-trainees and students. They are in line with the previous study conducted by Ginja and Chen (2020) that the differentiated instruction approach is essential for a diverse classroom. It increased students' motivation and improved their relationship between students and teachers and also narrowed the gap of students. Students received a varied learning process which was suitable to their uniqueness and needs. The students were facilitated with different processes of learning that enable optimizing their knowledge, attitude, and skills. For the teacher, based on the questionnaire, they mentioned the so-called creative, innovative, and eagerness to learn more and more to fulfill the students' needs. Regardless of the positive impacts, the shortcut was unavoidable. Teacher-trainees spent too much time designing the diagnostic tests. Since they are not majoring in psychology or education theory, this lack of knowledge has brought about serious problems in the designing of the text items.
