INTRODUCTION

The rise of drug abuse (Psychotropic Narcotics and Addictive Substances) is not only in big cities, but has reached small cities throughout the Indonesian region ranging from lower middle to upper middle social level (Effendi, Lukman, 2008: 17). From the data available in the field of drug abuse, the most vulnerable are aged between 15-24 years. It seems that the younger generation is a strategic target of illegal drug trade. Therefore we all need to be aware of the dangers and their effects on the threat of survival of the younger generation. The health sector plays an important role in efforts to overcome the danger of drug use (Mangku, Made Pastika, et al, 2017: 56-58).

Young people or adolescents in this case are experiencing puberty (personality development) so it tends to be a dilemma for taking responsible decisions, this results in delinquency that leads to freedom of sex and the like. Here it is seen that sex instruction without education in sexuality can lead to promiscuity (association with anyone and abusive sexual relations (Suraji and Sovia Rahmawatie, 2018: 13). Regarding the objectives of sex education some experts argue that: (1) Business to prepare adolescents towards psychological maturity so that later they are able to form happy families (Athar, Shahid, 2004: 21) (2) provide an understanding of the process of maturity, both physical and emotional related to sex (Sarlito W.Sarwono, 2002 : 19) (3) provides useful instructions regarding the responsibilities of each in dealing with the opposite sex (Shadily, Hasan, 1993: 22) .

Bandungan Region Semarang district is populated tourist area is very complex, many pendatang coming into this area with a variety of different purposes. "As a result of the large number of incoming migrants and complete information can have a positive or negative effect" (Kartono, Kartini, 1992: 17) . Harapan Bangsa High School is located in Getas Village, Kaloran Subdistrict, Temanggung Regency, which is located next to Semarang Regency, especially in the Bandungan area, where there are plenty of nightclubs that are quite alarming. To avoid negative influences, especially those related to juvenile delinquency, of course there must be a strong fortress of adolescents to ward off negative influences, legal development as well as anti-drug socialization and promiscuity among teenagers of Harapan Bangsa High School students need to be needed so that students can better understand and as the deterrence of negative influences.

Based on the analysis of the problem, the formulation of the problem in this activity is "How Can Anti-Narcotics and Free Sexual Socialization Activities Can Reduce Drug Abuse and Free Sex Among Adolescents of Harapan Bangsa High School Students in Kaloran District, Temanggung Regency? " .

Although there are already special laws that regulate, drug abuse and free sex are increasingly rampant until now. For that all parties must be more intense to campaign for it among adolescents (Sofyan, Ahmadi, 2007: 32). Target and specific objectives of this activity are: (1) Membantu students in developing kepribadian-

nya, preparing and delivering a teenager to the direction ke immaturity psychology 's so able to mengambill decisions are responsible, such as family life, divorce, morality in sex, etc. (2) Reducing juvenile delinquency among Harapan Bangsa High School students in the sub-district of Kaloran, Temanggung Regency. (3) Inform and disseminate the influence of drug abuse. (4) Informing and Disseminating the influence of free sex among adolescents through anti-drug socialization and promiscuity.

While the outcomes and benefits of this activity are the creation of a comprehensive understanding (social health and law) and the strengthening of the ability to independently capture drug abuse and free sex among adolescents. It is hoped that through this activity students can realize these things with their peers.

METHOD

The method used in the socialization activities this time is active, participatory, lecturing, discussion, and video display as an effective media in delivering the material . Lectures and discussions are used to explain the dangers of narcotics, psychotropic substances, and addictive substances as well as promiscuity that endangers teenagers today. Participants in this activity are high school students who are of a vulnerable age for drug abuse and promiscuity. This socialization was conducted on Wednesday, October 30, 2019 at Harapan Bangsa High School, Kaloran District, Temanggung Regency with the theme "Millennial Generation Without Drugs."

Broadly speaking, in implementing this program is divided into several stages, namely:

1. Preparation phase

In this stage, the KKN team contacted relevant parties namely, BNN Temanggung Regency and Harapan Bangsa High School regarding the implementation of the socialization. Furthermore, the KKN team conducted a briefing and jobdesk distribution related to the socialization event to be held.

2. Implementation Stage

The Anti-Narcotics and Free Relationship Program was held at Harapan Bangsa High School, on October 30, 2019. Activities began at 08.30 West Indonesia Time until 11:00 West Indonesia Time intended for all students of class X, XI and XI. It is not without reason because this socialization is very necessary for the survival of the younger generation , especially in the teens of high school students . The number of participants who participated in this outreach activity were 82 students.

3. Evaluation Stage

The evaluation phase is needed so that we can measure the success of the work program that we have carried out. For the anti-drug and drug socialization program the evaluation model used is research oriented, which is oriented to the impact and impact of the program. The influence and impact of the program can be observed from the patterns of student behavior after the socialization. A small example is to observe the target behavior of a program that is still doing things that are negative in daily life or not like consuming alcohol or

illegal drugs.

Then it discusses the methods used in the socialization of the Anti-Drug program and Promiscuity, the program was implemented with two methods by a combination of training and awareness or increase understanding of the problem. First, students will be made aware of and added to their understanding regarding the dangers of narcotics and promiscuity, especially drug trafficking today. Then students are also made aware of the importance of maintaining relationships for the future, with real action avoiding everything related to drugs and promiscuity by increasing student academic and non-academic activities such as community activities and school organizations. It aims to avoid and prevent students from falling into things that are distorted or unwanted.

DISCUSSION

Drugs and promiscuity are problems that are often faced by adolescents. The high problems that occur are driven by economic factors and lack of supervision by parents. This has resulted in teenagers losing direction of the end of their future. So that the teens vent in a way that can make themselves happy, because happiness they do not get in their families. Encouragement from external factors, for example, due to the invitation of friends and / or because of a supportive social environment that can encourage teens to do bad deeds. Therefore, the 2019 UNNES Community Service Team provided a solution to its perspective by looking at the problems in the field by providing counseling on Anti-Narcotics and Free Relationship at Harapan Bangsa High School.

Problems related to the high number of adolescents rehabilitated by BNN in Temanggung Regency, has encouraged UNNES KKN 2019 students to carry out Anti-Narcotics and Free Sexual Socialization activities. But now the problem is how the method must be carried out so that the socialization can be carried out in a fun way so that it can attract the attention of students. Students of UNNES 2019 KKN carried out the socialization by inviting the National Narcotics Agency (BNN) of Temanggung Regency to conduct socialization so that the implementation of giving material was clearer and able to attract students' attention because it was accompanied by real examples of cases that had occurred in Temanggung Regency. So that the students can be realized, basically drugs and promiscuity can be avoided as early as possible as it can have a negative impact on himself and social impacts that will be accepted by his family.

Therefore, UNNES KKN students give Anti-Narcotics and Free Relationship Socialization to high school students of HARAPAN NATION with the aim of optimizing students' knowledge with the dangers of drugs and promiscuity. Hope with the lectures, the students can be aware of the impacts that will result, both can provide valid information related to the dangers of drugs and promiscuity, which next students are expected to be familiar with the information obtained so

that the students will can be a role model for the people around his village and can be the successor to a generation without drugs and behave well.

CONCLUSION

The urgency of the problem of drug abuse and juvenile delinquency in Indonesia certainly cannot be left alone. One of the things that can be implemented to overcome these problems is through anti-drug education which in this activity is carried out socialization or counseling to high school students by Semarang State University students who are conducting a Real Work Lecture in Getas Village. This outreach activity took the National Narcotics Agency (BNN) in the hope of providing awareness to students regarding the dangers of drug abuse and juvenile delinquency.

For educational institutions, the government and parents must work together in shaping the character education of today's young generation. It is hoped that the school can encourage its students to participate in positive activities such as school organizations so that they can avoid promiscuity and drug abuse, because the main target is the younger generation. Students are expected to be more selective in relationships both in the school environment and in the community and fortify themselves with sufficient knowledge and faith so as not to fall into something that will threaten their future.
